

Control4® Smart Garage Packages

Control4® ZCA-SGP10A-2D-ZP

The Smart Garage Package makes it easy for Control4 Dealers to offer homeowners the added convenience, security, and peace of mind they want from their garage.

In most homes, the garage door is the only motorized door. The Smart Garage Package integrates this capability for Control4® homes. Homeowners can open or close the garage door by carrying a ZigBee® remote control device in the vehicle or on a key ring. The door can also be automated based on the time of day or other conditions.

Installing a two-door Smart Garage Package allows complete monitoring, operation, and remote control of any motorized garage door. Each garage door package contains the necessary gear to completely automate your Control4 garage project. Installing the gear takes just a few minutes with minimal wiring. Recognition of the devices by Composer Pro is quick and seamless.

This “automation-in-a-box” makes adding smart garage door features to the Control4 home simple and convenient. The result provides homeowners with peace of mind, security, and convenience.

Ease-of-installation—The Smart Garage Package is designed for quick installation and high reliability. The Wireless Contact Sensors and Relays are easily installed and rail-mounted garage door contacts quickly install vertically on the door channel, eliminating clumsy floor-mounted contacts and cracked cement. The Mini Remote includes a visor clip and lanyard for easy placement in the car or on a key ring. The Smart Garage Package can be easily installed in as little as 30 minutes.

Use the Smart Garage Package with new or existing garage doors to wirelessly add capabilities to Control4 projects like:

- Remote-controlled garage open and close
- Automatic time-based garage open or close
- 4Sight remote garage open and close
- Home lighting scene integration (and other home automation events) based on garage door open/close states
- LED keypad status changes based on garage door open/close states
- Motion-activated “smart” lighting

In addition to controlling the garage, the Mini Remote’s additional buttons and programming functionality allow drivers to turn on lights, open gates, activate climate control systems, and activate “panic scenes” from their vehicles.

The Smart Garage Package is designed for either new construction or retrofit, so no prewiring is required. Works with most garage motors.

Control4® ZCA-SGP10A-2D-ZP

Model number and package contents	2-Door Deluxe Smart Garage Package (ZCA-SGP10A-2D-ZP) <ul style="list-style-type: none"> • 1 Mini Remote • 1 External Thermistor • 1 Wireless Contact Relay (External Antenna) • 1 Wireless Contact Sensor • 2 Rail Mount Contacts • 1 Wireless Motion Sensor
Power specifications	
Mini Remote	<ul style="list-style-type: none"> • 2 AAA batteries
Wireless Contact Relay	<ul style="list-style-type: none"> • 9-24VDC or AC • Power consumption -100mA at 9V, fully active; 0.5A @ 50V; 1A @ 24V or less
Wireless Contact Sensor	<ul style="list-style-type: none"> • 2 AAA Batteries or 9-24VDC or AC • Power consumption -100mA at 9V, fully active; 0.5A @ 50V; 1A @ 24V or less
Wireless Motion Sensor	<ul style="list-style-type: none"> • 1 9V battery • Wiring requirements: Contacts and relays accept AWG 16-28 wiring
Environmental	
Humidity	5% to 95% non-condensing
Storage temperature	-20°F - 158°F (-28°C - 70°C)
Operational temperature	-20°F - 158°F (-28°C - 70°C)
External Thermistor measurement range	-20°F - 158°F (-28°C - 70°C)
Miscellaneous	
Wireless specifications	<ul style="list-style-type: none"> • Supports ZigBee PRO protocols (based on IEEE 802.15.4 ZigBee) • ZigBee® Extender Technology

For more detailed specifications, see each individual product's datasheet.
